FOREWORD

There has been a decided interest in daylilies shown by many new people, due to finer varieties available for many purposes. The past year brought ample moisture, and many varieties bloomed again in September.

Give them plenty of room, at least 2 feet, and do not judge a variety until it has established itself, which takes a couple of years. We ship only freshly dug plants, no cold storage ones sold at bargain prices. The fact that many persons reorder each year shows their confidence in our plants.

KEY TO SYMBOLS: E-early; EM-early midseason; M-midseason; LM-late midseason; L-late. EXT means extended bloomers, lasting until 10:30 p. m. RE means reblooming in fall. Varieties showing green foliage in winter are marked EV. Numbers following the name as "EVADNE (51)-48" indicates year of introduction in parenthesis and the height of the plant in flower, in inches. J. C. is Junior Citation award by Hem. Society; A. M. Award of Merit; H. M. Honorable Mention. Stout Medal awarded each year is the highest honor, and year of award is given.

Our blooming season begins in mid-May. Mid-season varieties have larger flowers and their season is from the middle of June until the second week in August. Late ones bloom from August until early October. The time of bloom given is for this locality.

CULTURE: The plants bloom best in a sunny location, but will take shade for a half a day. They need moisture before and during the blooming period to produce larger and finer blooms. Allow two feet between plants in normal growth. Reset and divide in early spring or after their blooming period in August until late September. In planting, place the crown a little below the surface, and spread out the roots. Old or dried manure and compost with some bonemeal added to induce a good root growth and large flowers. Avoid chemical fertilizers or those high in nitrogen, as the color of the flowers are then often not normal.

FRAGRANCE: All evening bloomers and the lighter yellow (00-5) are fragrant. Also nearly all in the yellow and orange shades. Pink, red and bi-color varieties do not seem to have it, or only in a limited amount.

COLOR LISTING: Varieties are placed in color groups.

Yellow comes in many shades, some greenish as barium and citron yellow, or lemon in color. Then there are the pure yellows and some are gold or orange in coloring. As the old Betscher hybrids are well known, and have a wide range in the yellow and orange shades, they were used as a basis for depth of color and begin with "1". Flowers lighter in colors are marked "0" or "00" for a paler shade. Other varieties having the same color number may be entirely different in form, size of flower, or height. The numbers are used only to help you select different shades in the yellow color range. Pink, red shades and color patterns are marked L, M or D before the name indicating whether they are LIGHT, MEDIUM or DARK in general coloring. Advise if this method is helpful to you.

TRANSPORTATION: STRONG SINGLE DIVISIONS are sent postpaid. Local orders can be dug anytime, if the weather allows, but those for shipping are sent in early spring until mid-May, and after the blooming season until October. Those listed for fall delivery are sent after the middle of August. No orders are accepted under \$3.00. Add 20c extra for special handling. Ohio purchasers please add sales tax.

SEEDLINGS: Each year new varieties are developed, showing improvements in form and color. Of those only a few are set aside for further testing. Try some, all will bloom this year. You will receive colors that are not possible in named varieties at the same price. Large plants. sent only after blooming season.

FINE MIXTURE: Many colors. 8 for \$2.50 postpaid; 20 for \$5.00; 50 for \$10.00 express collect. ARISTOCRAT SERIES: Fine selection, labeled. Six diff. for \$3.00; 12 diff. for \$5.00 postpaid.

4 FINE PALE YELLOWS: 75c, 3 for \$2.00, all 4 for \$2.50. Limited stock. These can be sent in spring.

LOCATION: We are located on the CCC Highway (State Route No. 3) about three squares beyond Kenwood Road if coming from Montgomery. You are cordially invited to visit the garden at any time.

INTRODUCTION

Daylilies are steadily improving in form and color. The following introductions have been carefully selected as being distinct in form and color to known existing named varieties. Two descriptions are used. Ridgeway's chart is nearest to the hem colors, and has been used for exact coloring. The second one is the general color most people would see in the flower. All pale yellows are distinct in form and growth, and are most in demand.

1958 Introductions

- I FAIR COLLEEN**—46" July-Aug. LM J. C. 1956. Almost self, fluted recurving petals of light golden apricot, faint white ribs, sepals slightly deeper shade; smooth large dark green throat. Heavy substance. A good-sized rounded flower, nearly an equal circle. Color changes to cream in the afternoon. No bleaching or fading. Color in throat does not change. Won an A. H. S. Award in Lexington in 1955. Limited stock. Aug. delivery.\$10.00
- L QUEEN CITY**—42" July-Aug. LM Large 6" flower. Petals are a very light cadmium yellow, slightly recurving, widely spreading. Sepals have a yellowish-green overcast, and crimped edges. Dark green center, lighter throat. A broad V banding of faint russet on petals and less on sepals. Heavy substance. Non-fading. Good color.\$7.50
- I ROBERT**—48" July-Aug. LM. Sister seedling to Fair Colleen, slightly larger, but different in form. Has longer and narrower petals. Light apricot yellow self. Small dark green throat. Colors remain until afternoon, when it mellows to cream. No bleaching. Throat retains color. Good substance. Quite distinct.\$7.50
